The CAREFOAM Two-piece chair is a key component of a restraint-free Fall Reduction Program. It's "all foam" construction eliminates hard edges, reducing the potential for skin trauma. The chair is designed to safely accommodate patients in a variety of seating positions, providing head, neck, and lumbar support. It is effective in the care of clients suffering from dementias such as Alzheimer's or the uncontrolled movements of Huntington's Disease. The patient's comfort and security in the chair helps to reduce unwanted wanderings. Manufactured from five different densities of foam, including "memory foam" in the seat, the chair provides appropriate overall support and improved pressure reduction. Unique features accommodate both weight-bearing residents and the use of mechanical lift. The ottoman facilitates multiple support positions and uses.
